

/*Ms.Saumya is working on a MySQL table named 'Hotel' having following structure:She need to perform following task on the table:

i. To fetch last 2 characters from the user_id column.*/

```
select user_id,substr(user_id,-2,2) from user;
```

```
select * from user;
```

```
insert into user(user_id,username)
```

```
values
```

```
(1001,'varun'),
```

```
(1002,'santosh'),
```

```
(1003,'john');
```

-- ii>ii. To display the values of name column in lower case.

```
select username, lower(username) from user;
```

-- iii. To display 3 characters from 3rd place from the column city.

```
select city, substr(city,3,3) from user;
```
