```sql
/*Write the SQL functions which will perform the following operations:

i) To display the name of the month of the current date .*/

select date_format(curdate(),'%M');

-- ii) To remove spaces from the beginning and end of a string, " Panorama ".

select trim( " panorama ");

-- iii) To display the name of the day eg, Friday or Sunday from your date of birth, dob.

select date_format("dob","%W");

select dayname(curdate());

-- iv) To display the starting position of your first name(fname) from your whole name (name).

select firstname ,substr(firstname,1,1) from employees;

-- v) To compute the remainder of division between two numbers, n1 and n2

select mod(n1,n2);
```
